

Zoophilia

WHAT IS ZOOPHILIA?

1. History

The Greek word zoophilia means "love only to animals". Within oldGreek culture selected animals were destined for sex with a men, for example, Eskulaps snake. ESKULAP was the Roman god of medical care, the Greek Asclepius, which was a sign of stick wrapped with snake. Romans have adopted such practice and have added their own, so that they had multiple zoophilic rites by sacrificing animals in honor of Jupiter.

In the Middle Ages, the man saw the animal only as a useful object; zoophilia was indecent.

This excessive pudency has somewhat changed when they begin to respect the animals. The famous "luxury" dog, for example, has been nothing more than magnets, which was licking or walking under masters legs. As a pet was actually intended for the diversification of sexual events. Although we are in the twentieth century, many countries legalised zoophilia but to this day remained almost taboo around the world.

2. Legislation

The most important issue for zoophile have legal control of the country which can be very complex and can vary from one country to another varies greatly.

Thus, in Germany, France, Spain and in most other Member States of the European Union and Switzerland and even Russia zoophilia is legal, while the production of pornographic purposes in most of these countries in principle is prohibited the importation and distribution were strictly limited to explicit erotic boutiques and videostores.

Otherwise, in countries such as Great Britain, Canada, Australia and New Zealand, zoophilia is illegal and you can condemn the multi-annual or lifeimprisonment.

```

In the United States, the situation is different and depends on the laws of the federal states.

3.The difference between bestialist and zoophilist

Bestialist use the animal for sexual activities - taking to it does not feel great love, but feels especially just sexual attractiveness. For this reason, unfortunately happens that a small number of bestialists include sexual coercion, pain or even damage hits, like a rapist.

Zoophil has a relationship with their animals as if they were husband and wife or two lovers who consent to sexual activity, and this represents their mutual pleasure. In nonverbal communication share a unique sex, which is truly a special relationship. If the sexual contact performed in a way that is mentally and physically compatible with the animal, this should not affect her health and welfare.

Zoophils tolerate sexual aborted sex with animals. These show us the bodies when they are biologically mature for sex.

Some are most likely involved in human sex under duress, or even memorized, but for zoophil this is something unacceptable. Zoophil would never trained their animal, in order to sexually satisfy him. In our opinion, such an act committed by a small number of bestialists.

The existence of the relationship between man and the animal based on trust, diligence, without violence, without the abuse. Nevertheless, in our society there are still concerns that a rule based on moral and ethical concerns.

4. Definition of Zoophilia

Zoophilia is either a must-have love for animals and a love of animals including sexual acts between man and animal. Both the definition exclude violence against animals. Zoophilia should not be confused with brutality to animals, even with their abuse. Real zoophil would never hurt his animal.

```

5. Categorization

Categories of zoophils are multiple, like their favorite species. Some of them are interested exclusively for animals, while other sexual orientation in it spread predominantly heterosexuals, homosexuals or bisexuals. In particular, dogs and horses are of the type held by zoophils favorite, but also cats, cattle, rodents, reptiles, dolphins, whales and many other species may be added to their repertoire. In general, the more exotic animals such as, the harder it is closer.

6. Making it

Normally, it is possible to do the same with animals than with human partners: Petting, vaginal, anal oral or cuddle, etc.. Of course, this depends largely on each species separately. It is important to do only what fits well.

7. Prevalence

Since the zoophile still afraid to be persecuted because of their own action sand beliefs, there is no credible data on its prevalence. We know only that they are many and that they live everywhere.
